Examiner : Uzma Alam
Docket No. : 16440.4004

Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

1. (currently amended) A method of distributed collaborative computing comprising:
 - partitioning a collaborative function into sub-functions;
 - assigning at least one said sub-function to each of a plurality of logical processes;
 - associating a respective management process with each of said logical processes, said logical processes configured so that each said logical process is capable of communicating with every other said logical process through said respective management process;
 - communicating between said logical processes using said respective management processes;
 - monitoring said respective management processes with a single supervisor process to determine whether a quality of service is met; and
 - when the quality of service is not met, spawning a new logical process.
2. (original) The method of claim 1, wherein said collaboration function comprises real-time conferencing.
3. (original) The method of claim 1, wherein said collaboration function application sharing.
4. (original) The method of claim 1, wherein said collaboration function document sharing.
5. (original) The method of claim 1, wherein said sub-functions comprise collaboration serving, application serving, log serving, license management, and meeting management and wherein each said sub-function forms at least one logical server.

Applicant	:	Min Zhu, et al.
Appl. No.	:	16440.4004
Examiner	:	Uzma Alam
Docket No.	:	16440.4004

6. (original) The method of claim 1, wherein said logical processes are instantiated on at least one physical server.

7. (currently amended) A computer program for use in distributed collaborative computing, comprising computer instructions for:

partitioning a collaboration function into sub-functions;

assigning at least one said sub-function to each of a plurality of logical processes;

associating a respective management process with each of said plurality of logical processes, said logical processes configured so that each logical process is capable of communicating with every other said logical process through said respective management process;

communicating between said logical processes using said respective management process;

monitoring said respective management processes with a single supervisor process to determine whether a quality of service is met; and

when the quality of service is not met, spawning a new logical process.

8. (original) The computer program of claim 7, wherein said collaboration function comprises real-time conferencing.

9. (original) The computer program of claim 7, wherein said collaboration function comprises application sharing.

10. (original) The computer program of claim 7, wherein said collaboration function comprises document sharing.

11. (original) The computer program of claim 7, wherein said sub-functions comprise collaboration serving, application serving, log serving, license management, and meeting management and wherein each said sub-function forms at least one logical server.

Applicant : Min Zhu, et al.
Appl. No. : 16440.4004
Examiner : Uzma Alam
Docket No. : 16440.4004

12. (original) The computer program of claim 7, wherein said logical processes are instantiated on at least one physical server.

13. (currently amended) A computer-readable medium storing a computer program executable by a plurality of server computers, the computer program comprising computer instructions for:

partitioning a collaboration function into sub-functions;

assigning at least one said sub-function to each of a plurality of logical processes;

associating a respective management process with each of said plurality of logical processes, said logical processes configured so that each said logical process is capable of communicating with every other said logical process through said respective management process;

communicating between said logical processes using said respective management processes;

monitoring said respective management processes with a single supervisor process to determine whether a quality of service is met; and

when the quality of service is not met, spawning a new logical process.

14. (original) The computer-readable medium of claim 13, wherein said collaboration function comprises real-time conferencing.

15. (original) The computer-readable medium of claim 13, wherein said collaboration function comprises application sharing.

16. (original) The computer-readable medium of claim 13, wherein said collaboration function comprises document sharing.

17. (original) The computer-readable medium of claim 13, wherein said sub-functions comprise collaboration serving, application serving, log serving, license management, and meeting management and wherein each said sub-function forms at least one logical server.

Applicant : Min Zhu, et al.
Appl. No. : 16440.4004
Examiner : Uzma Alam
Docket No. : 16440.4004

18. (original) The computer-readable medium of claim 13, wherein said logical processes are instantiated on at least one physical server.

19. (currently amended) A computer data signal embodied in a carrier wave, comprising computer instructions for:

partitioning a collaboration function into sub-functions;

assigning at least one said sub-function to each of a plurality of logical processes; associating a respective management process with each of said plurality of logical processes, said logical processes configured so that each said logical process is capable of communicating with every other said logical process through said respective management process;

communicating between said logical processes using said respective management processes;

monitoring said respective management processes with a single supervisor process to determine whether a quality of service is met; and

when the quality of service is not met, spawning a new logical process.

20. (original) The computer data signal of claim 19, wherein said collaboration function comprises real-time conferencing.

21. (original) The computer data signal of claim 19, wherein said collaboration function comprises application sharing.

22. (original) The computer data signal of claim 19, wherein said collaboration function comprises document sharing.

23. (original) The computer data signal of claim 19, wherein said sub-functions comprise collaboration serving, application serving, log serving, license management, and meeting management and wherein each said sub-function forms at least one logical server.

24. (original) The computer data signal of claim 19, wherein said logical processes are instantiated on at least one physical server.

Applicant : Min Zhu, et al.
Appl. No. : 16440.4004
Examiner : Uzma Alam
Docket No. : 16440.4004

25. (new) The method of claim 1, further comprising spawning the plurality of logical processes with a process manager.

26. (new) The method of claim 25, further including sending a request to the process manager to spawn the new logical process when the quality of service is not met.
